1 Introduction

This is an automatically generated description of the ecosystem model BSH-ERGOM (of HBM-ERGOM) version v2017 . Model formulation is provided by text files in compliance with the rules of the Code Generation Tool (CGT) by Hagen Radtke (see www.ergom.net).

The model consists of a set of state variables, the so called tracers. They are defined and described in Chapter 2.

The following Chapter 3 is the main part of this model description document, since it describes the processes which change the tracer concentrations over time. They are defined analog to chemical processes, two components describe their action:

- A process equation which describes the transformation from precursors (on the left-hand side) to products (on the right-hand side), and
- a turnover rate, describing how fast the process runs.

The rate at which a process changes a tracer can then easily be determined by multiplying the process turnover rate with the stochiometric ratio in which it consumes or produces the tracer according to the reaction equation.

We structured the documentation into different process types to keep the documentation readable. So all processes belonging to one type (e.g. phytoplankton assimilation) are listed together with their constants and auxiliary variables they depend on. This means that some constants, such as stochiometric ratios, will occur several times in this documentation, making it longer. We take this compromise for the sake of readability, keeping all information required to understand a specific process in its own section.

The classical way of describing an ecosystem model is by giving the tracer equations. We still do this in the last chapter for the sake of completeness, but rather suggest to stick to Chapter 3 to understand the model, and see Chapter 4 as a supplement only.

2 Description of model state variables (tracers)

Tracers in the water column only	
amm	**ammonium (mol/kg)**
nit	**nitrate (mol/kg)**
phos	**phosphate (mol/kg)**
sil	**silicate (mol/kg)**
dia	**diatoms (mol/kg)**
vertical speed =	-0.2 m/day
opacity =	1.0 m^2/mol
flag	**flagellates (mol/kg)**
opacity =	1.0 m^2/mol
cyano	**cyano bacteria (mol/kg)**
vertical speed =	0.1 m/day
opacity =	1.0 m^2/mol
mez	**meso zooplankton (mol/kg)**
miz	**micro zooplakton (mol/kg)**
det	**Detritus (mol/kg)**
vertical speed =	-1.5 m/day
opacity =	1.0 m^2/mol
dets	**S-Detritus (mol/kg)**
vertical speed =	-1.5 m/day
ldon	**ldon is the labile DON fraction (mol/kg)**
oxy	**Oxygen (mol/kg)**
amm_with_totatmos_N	**ammonium; containing (mol/kg)**
nit_with_totatmos_N	**nitrate; containing (mol/kg)**

continued on next page...

Tracers in the water column only, continued from previous page

dia_with_totatmos_N	**diatoms; containing (mol/kg)**
vertical speed =	-0.2 m/day
	flagellates; containing (mol/kg)
flag_with_totatmos_N	
	cyano bacteria; containing (mol/kg)
cyano_with_totatmos_	
vertical speed =	0.1 m/day
mez_with_totatmos_N	**meso zooplankton; containing (mol/kg)**
miz_with_totatmos_N	**micro zooplakton; containing (mol/kg)**
det_with_totatmos_N	**Detritus; containing (mol/kg)**
vertical speed =	-1.5 m/day
	ldon is the labile DON fraction; containing (mol/kg)
ldon_with_totatmos_N	
amm_with_agri_N	**ammonium; containing (mol/kg)**
nit_with_agri_N	**nitrate; containing (mol/kg)**
dia_with_agri_N	**diatoms; containing (mol/kg)**
vertical speed =	-0.2 m/day
flag_with_agri_N	**flagellates; containing (mol/kg)**
cyano_with_agri_N	**cyano bacteria; containing (mol/kg)**
vertical speed =	0.1 m/day
mez_with_agri_N	**meso zooplankton; containing (mol/kg)**
miz_with_agri_N	**micro zooplakton; containing (mol/kg)**
det_with_agri_N	**Detritus; containing (mol/kg)**
vertical speed =	-1.5 m/day
ldon_with_agri_N	**ldon is the labile DON fraction; containing (mol/kg)**

Tracers in water and pore water

Tracers in fluff and sediment

nitr	**nitrogen in the sediment (mol/m^2)**

continued on next page...

Tracers in fluff and sediment, continued from previous page	
`sili`	**silicate in the sediment (mol/m^2)**
`nitr_with_totatmos_N`	**nitrogen in the sediment; containing (mol/m^2)**
`nitr_with_agri_N`	**nitrogen in the sediment; containing (mol/m^2)**

3 Description of model processes, ordered by process type

3.1 Process type standard

Processes
nitrification (sediment only) [mol/m^2/day]
`ONnitr*NOR*oxy + amm ->`
`fnitr*recs*nitr*theta(oxy)`
`nitrification_amm_se`
`=`
mineralization of bentic nitrogen, mmol N/m2/d (sediment only) [mol/m^2/day]
`nitr + ldn_N_sed*nit + NOR*ldn_O_sed*oxy -> amm + rfr*one_pburial*phos`
`recs * nitr`
`mineralization_nitr_`
`=`
